REPLACEMENT SHEETS

ABSTRACT OF THE DISCLOSURE

An actuator is disclosed for actuating an aerosol valve for dispensing an aerosol product from an aerosol container. The actuator comprises an actuator button being rotatable relative to a base for movement between a locked rotational position and an unlocked rotational position. The actuator button has a rigid sidewall supporting a rigid top actuating surface with an actuator button orifice defined in the sidewall of the actuator button. The actuator button is movable relative to the base for actuating the aerosol valve to dispense the aerosol product when the actuator button is rotated into the unlocked rotational position. The actuator button is inhibited from actuating the aerosol valve when the actuator button is moved into the locked rotational position.
